Shopify Complete Training Guide

2-Day Intensive Program · Beginner to Launch · Edition 2025

The official combined training guide issued by Digital Heroes.
Merges the 2-Day Shopify Program with Store Design Standards,
Shopify AI (Sidekick), and Liquid coding — for complete beginners.

What's *inside*.

Ten parts covering Shopify setup, design, apps, AI, and Liquid coding.

Getting Started with Shopify

Setup, Partner Account, Development Store, Dashboard

A

Getting Started.

Shopify is an all-in-one eCommerce platform that lets anyone create an online store and sell products without needing to know how to code. It handles everything: your website, product listings, payments, shipping calculations, and analytics.

NOTE As a trainee, you use a FREE Development Store. No credit card or payment is required.

Creating a Shopify Partner Account

A Shopify Partner Account lets you create unlimited free development stores — the account type used by all Shopify developers and designers worldwide.

1	Open Browser	Go to partners.shopify.com and click 'Join for free'
2	Create Account	Use a fresh Gmail. Enter full name, select India, choose 'I build stores for clients'
3	Verify Email	Check inbox for Shopify verification email. Click the link to verify.
4	Access Dashboard	You land on the Partners Dashboard. Bookmark: partners.shopify.com/organizations

Setting Up a Development Store

A Development Store is a free Shopify store you can build without paying for a subscription.

1	Add Store	Partner Dashboard → Stores → Click 'Add Store' (blue, top right)
2	Select Dev Store	Popup: select 'Development Store' → Click Next
3	Fill Details	Store name: use your niche (e.g. GlowSkin Beauty). Purpose: 'Create a store for a client'
4	Enable Password	Admin → Online Store → Preferences → Password protection → Enable → Set: Test@123 → Save

Navigating the Shopify Admin Dashboard

After creating your store the Admin Dashboard is your control panel for everything:

Dashboard Section	What It Does
Home	Overview of store performance and quick access links
Orders	View and manage customer orders (not relevant during development)
Products	Add, edit, and organize your products and collections
Customers	View customer list and purchase history
Analytics	Track store traffic, sales, and conversion rates
Marketing	Set up campaigns, automations, and promotions
Discounts	Create discount codes and automatic promotions
Online Store	THIS IS WHERE YOU BUILD YOUR STORE — themes, pages, navigation
Settings	Configure payments, shipping, taxes, and store details

NOTE You will spend most of your time in Products and Online Store. Learn these two sections well.

Brand Identity & Planning

Niche, Colors, Fonts, Logo, 60/30/10 System

B

Brand Identity.

Before you touch a single button in Shopify, you must plan your brand. A store without a clear brand identity looks unprofessional and will not convert visitors into buyers.

Step 1 — Choose Your Niche

A niche is the specific market your store focuses on. Choose ONE niche and stick to it.

Niche	Example Products
Beauty & Skincare	Face serums, moisturizers, lip care, facial tools
Fashion & Clothing	Streetwear, minimalist basics, activewear
Pet Supplies	Dog accessories, cat toys, grooming kits
Baby & Kids	Educational toys, baby clothing, nursery items
Sports & Fitness	Resistance bands, water bottles, gym accessories
Home Decor	Candles, wall art, aesthetic room accessories
Dropshipping / General	Mix of trending products — tech, lifestyle, travel

NOTE Pick a niche you find interesting. You will enjoy building it more — and the results will show.

Step 2 — Define Your Brand

Answer these questions BEFORE you open Shopify:

Brand Element	Description & Notes
Brand Name	Short, memorable. E.g. GlowLab, UrbanPaws, TinySteps
Target Customer	Who buys from you? Age, gender, lifestyle, budget
Brand Voice	Choose one: Premium / Playful / Minimal / Bold / Friendly
Brand Promise	What problem do you solve for your customer?
Primary Color (60%)	Main backgrounds and large sections — defines your brand
Secondary Color (30%)	Cards, accents, supporting sections
Accent Color (10%)	Buttons, CTAs, sale tags — must POP visually
Heading Font	For titles and section headers — match brand style
Body Font	For paragraphs and product descriptions — keep readable

Color Palette — The 60/30/10 System

Every professional store follows a structured color ratio. Use EXACTLY 3 colors:

Ratio	Color Role	Where to Use It
60%	Primary Color	Main backgrounds, hero sections, dominant areas. Defines your brand.
30%	Secondary Color	Supporting sections, card backgrounds, sidebars.
10%	Accent Color	Buttons, CTAs, sale badges, icons, hover states. Should POP.

NOTE Use coolors.co or Adobe Color to generate palettes. Export as image for reference.

Fonts & Typography

Brand Style	Recommended Font Pairing
Fashion / Luxury	Playfair Display (Heading) + Lato (Body)
Tech / Modern	Inter (Heading) + Roboto (Body)
Playful / Kids	Poppins (Heading) + Nunito (Body)
Minimal / Clean	Montserrat (Heading) + Open Sans (Body)
Bold / Streetwear	Oswald (Heading) + DM Sans (Body)

NOTE NEVER use more than 2 fonts. More than 2 fonts makes your store look unprofessional.

Adding Products to Your Store

Product Creation, SEO, Images, Collections, Checklist

Adding Products.

You need 3 to 10 products in your store. All must be relevant to your niche with high-quality images, good reviews, and solve a real problem.

Where to Find Products

Source	Notes
AliExpress (aliexpress.com)	Largest dropshipping supplier. Search niche, filter 4 stars+. Use DSers to import.
CJ Dropshipping	Similar to AliExpress with faster shipping. Good for branded products.
Zendrop (zendrop.com)	Beginner-friendly platform with US-based products.
Manual Creation	If you have your own products or photos, create manually in Shopify.

How to Add a Product — Step by Step

1	Products → Add	Admin → Click 'Products' → Click green 'Add product' button top right
2	Write Title	Clear and specific. E.g. 'Vitamin C Brightening Face Serum 30ml'. Include key benefits.
3	Write Description	Benefits-first: Opening hook → Key benefits (bullets) → How to use → What's included. Min 150 words.
4	Upload Images	3 to 5 images minimum. First: clean white/light bg. Additional: lifestyle, close-ups. No watermarks.
5	Set Pricing	Price: customer charge. Compare-at Price: original price creates 'Sale' badge automatically.
6	Inventory and SKU	SKU e.g. GLOW-SERUM-30ML. Quantity: 100. Enable 'Track quantity' toggle.
7	Add Variants	Size, Color, Pack options. Click 'Add variant' and fill each with price and inventory.
8	Fill SEO Fields	Bottom of page → 'Search engine listing preview' → Meta Title (max 60) + Description (max 160).
9	Assign Collection	Right sidebar → 'Product organization' → Select or create collection.
10	Product Type + Tags	Type: e.g. 'Serum'. Vendor: brand name. Tags: skincare, serum, vitamin-c, glow

Product Quality Checklist

	Optimized title with key benefits included
	High-quality images — minimum 3 per product, no watermarks
	Clear description with benefits and features, 150 to 250 words
	Pricing set with compare-at price to show sale discount
	SKU and inventory quantity set correctly
	Variants set up if applicable (size, color, pack)
	SEO meta title and description filled in
	Collection assigned correctly
	Product type, vendor, and tags added
	Shipping info present on product

Theme Setup & Store Design

Dawn Theme, Theme Editor, Homepage Sections, Design Rules

D

Theme Setup.

The Theme is the visual template of your store. You will use the Dawn Theme — Shopify installs it by default on all new stores. It is clean, modern, and free.

PATH → Admin → Online Store → Themes → Customize

Understanding the Theme Editor

Element	What It Does
Left Panel	List of all sections on current page. Click to edit. Drag to reorder.
Center Canvas	Live preview of your store. What you see = what customers see.
Right Panel	Settings for selected section — text, colors, images, layout.
Top Bar	Switch between pages: Home, Product, Collection, Cart, etc.
Eye Icon	Toggle visibility — hide/show a section without deleting it.
Trash Icon	Delete a section permanently.
Add Section	Bottom of left panel — click to add new sections to the page.
Save Button	Top right — ALWAYS click Save after making changes. NOT auto-saved.

NOTE Always click SAVE before switching pages in the theme editor. Unsaved changes will be lost.

Setting Logo, Colors and Fonts

1	Upload Logo	Theme Editor → Click 'Header' → 'Logo image' → Upload your PNG (transparent bg) → Adjust width 120 to 160px → Save
2	Set Brand Colors	Theme Settings (paintbrush icon) → Colors → Click each swatch → Enter HEX code → Primary=bg, Accent=buttons → Save
3	Set Fonts	Theme Settings → Typography → Headings: click 'Change' → select heading font → Body: click 'Change' → save

Building Your Homepage — 10 Required Sections

Your homepage is the most important page. Add ALL of the following sections:

1. Announcement Bar

A thin bar at the very top of the site. Use for: free shipping offers, discount codes, limited-time deals. Example: FREE SHIPPING on orders above Rs.999, use code HERO10 for 10% off

How to add: Add section → Announcement bar → Edit text in right panel

2. Hero Banner (Image with Text)

The big, full-width banner at the top of the homepage — the FIRST thing visitors see. Include: a powerful headline, a 1-line subheading, and a CTA (Call to Action) button.

How to add: Image banner section → Upload background image → Edit heading → Set button text and link

3. Featured Collections

Show your main product categories as visual tiles. Helps visitors navigate directly to what they want.

How to add: Add section → Collection list → Select your collections → Adjust layout

4. Best-Selling Products

A grid showing your top products. Usually 4 to 8 products. This is where most conversions happen.

How to add: Add section → Featured collection → Choose your best-sellers collection → Set grid to 4 columns

5. Benefits / USP Section

USP = Unique Selling Proposition. Tell customers WHY they should buy from YOU. Use 3 to 4 icons with short text. Examples: Free Shipping, 30-Day Returns, Cruelty-Free, 24/7 Support.

How to add: Add section → Multicolumn → Add 3 to 4 columns with icons and short text

6. Product Highlight

Highlight one specific product or feature with a large image and description side by side.

How to add: Add section → Image with text → Upload image → Write product benefit text

7. Customer Testimonials

Social proof. Show 3 to 6 reviews from happy customers. Builds trust instantly. Stores with reviews convert up to 270% better.

How to add: Add section → Multicolumn or Testimonials → Enter review text, customer names, star ratings

8. Trust Badges

Small icons: Secure Checkout, Money-Back Guarantee, SSL Protected, Easy Returns. Critical for conversion.

How to add: Add section → Multicolumn or Custom HTML → Add trust badge icons from Flaticon or Canva

9. Newsletter Signup

A box where visitors enter their email. Helps build your email list for future marketing campaigns.

How to add: Add section → Email signup → Customize heading and button text

10. Footer

Bottom of every page. Must include: store logo, quick links (About, Contact, FAQ, Shipping), social media icons, and legal links (Privacy Policy, Terms of Service).

How to add: Click Footer in sections panel → Add link groups → Upload logo → Add social links

Essential Apps & Features

Required Apps, Installation, Configuration, Sidekick AI

E

Essential Apps.

How to Install Apps in Shopify

1	Open App Store	Admin → Click 'Apps' in left sidebar → Click 'Search for apps' or 'Shopify App Store'
2	Find the App	Search for the app by name → Click on it in the results
3	Install	Click 'Add app' → Click 'Install app' to confirm
4	Configure	Configure app settings after installation — every app needs setup to work properly

Required Apps — Install All of These

Judge.me Reviews

Adds a reviews section to your product pages. Customers can leave star ratings and written reviews. Builds social proof and increases conversions — stores with reviews convert up to 270% better than those without.

Config: Judge.me → Settings → enable All Reviews Widget and Star Rating. Add at least 3 sample reviews manually during training so the section is visible on products.

Shopify Search and Discovery

Improves the search bar on your store. Customers can filter products by size, color, price, and other attributes. Makes it much easier for customers to find exactly what they want.

Config: After installing, go to the app and configure filters relevant to your niche. E.g. for fashion: Size, Color, Price Range.

Shopify Bundles

Allows you to create product bundles — buy 2 get 1 free, bundle deals, multi-pack offers. Increases average order value (AOV), which is the single most important metric to improve profitability without more traffic.

Config: After installing, create at least 1 bundle from your products. Example: 3-Pack Serum Bundle — Save 20%.

Shopify Subscriptions

Lets customers subscribe for recurring orders — monthly delivery, weekly replenishment. Great for consumable products like skincare, supplements, pet food, or coffee.

Config: Apply to at least one product if relevant to your niche. Show monthly savings vs. one-time purchase to encourage sign-ups.

Labeler — Product Labels

Adds visual labels and badges to product images: New, Hot, Sale, Best Seller, Limited. Makes the product grid look far more professional and draws attention to key products.

Config: Add Best Seller to your top product and New to recently added products. Labels appear in collection grids and on the homepage featured section.

Using Shopify AI — Sidekick

Shopify Sidekick is an AI assistant built directly into Shopify Admin. Click the sparkle icon top right of admin to open it. Here are the most useful tasks:

Task	What to Type in Sidekick
Generate Sections	"Add a benefits section highlighting free shipping, easy returns, and quality products"
Improve Descriptions	"Rewrite this product description to be more persuasive: [paste description]"
SEO Meta Tags	"Suggest a meta title and meta description for a product called [product name]"
Layout Ideas	"What sections should I add to my homepage for a skincare brand?"
Blog Content	"Write a 300-word blog post about the benefits of vitamin C for skin"

Pages, Navigation & Store Structure

Essential Pages, Navigation Menus, Menu Structure

F

Pages & Navigation.

Your store needs specific pages to be considered professional and trustworthy. Without these pages, customers will not trust your store and they will leave.

How to create: Admin → Online Store → Pages → Add Page → Enter title and content → Save

Page Name	What to Write
About Us	Brand story. Who are you? Why did you start? What is your mission? Personal and relatable. 150 to 300 words. REQUIRED.
Contact Us	Email address, response time (we reply within 24 hours), and a contact form. REQUIRED.
FAQ	Answer 5 to 10 common questions: shipping time, returns, payment methods, data security. REQUIRED.
Shipping and Returns	Shipping times, shipping cost, return policy (30-day returns), how to initiate a return. REQUIRED.
Privacy Policy	Legal page. Auto-generate: Settings → Legal → Privacy Policy → Generate from template → Save. REQUIRED.
Terms of Service	Legal page. Auto-generate: Settings → Legal → Terms of Service → Generate → Save. REQUIRED.
Track Order	Optional but professional. Link to tracking app or add tracking number input form.

Setting Up Navigation Menus

Navigation menus tell customers how to move around your store. You need two menus: Main Menu at top and Footer Menu at bottom.

How to access: Admin → Online Store → Navigation → Click on Main menu

Menu	Recommended Links
Main Menu (Header)	Home Shop (/collections/all) About Us Contact Track Order
Footer Menu	About Us FAQ Shipping and Returns Privacy Policy Terms of Service Contact

NOTE To add a menu item: Click Add menu item → Type the name → Select the page or collection it links to → Click Save.

Testing, QA & Final Delivery

Checkout Testing, QA Checklist, Submission Package

Testing & QA.

Before submitting your store, test the ENTIRE customer journey as if you were a real customer. Shopify lets you process test orders with no real money involved.

Cart, Checkout & Customer Flow Testing

1	Enable Test Mode	Admin → Settings → Payments → Manage next to Shopify Payments → Enable Test mode toggle
2	Full Customer Journey	Browse homepage → Click product → Add to Cart → Apply discount code → Checkout
3	Test Card Details	Card: 4242 4242 4242 4242 Expiry: 12/26 CVV: 123
4	Check Orders Admin	Admin → Orders — test order should appear. If yes, checkout is working correctly.
5	Test Discount Codes	Admin → Discounts → Create code → Test at checkout → Confirm it applies
6	Mobile Testing	Open store on your phone → Check all sections display properly → Text must not overflow

Final QA Checklist

Store Setup

?	Store name matches the niche
?	Password protection is ON (password: Test@123)
?	Timezone and currency set correctly
?	All pages created: About, Contact, FAQ, Shipping, Privacy, Terms

Branding

?	Logo uploaded — PNG with transparent background
?	Brand colors applied consistently across all sections
?	Fonts set — heading and body (no more than 2 fonts)
?	Brand voice consistent in all written content

Products

?	3 to 10 products added with full details
?	All images are high quality and watermark-free
?	All product descriptions written — no placeholder text
?	Compare-at prices set to show sale discount
?	SEO meta title and description filled for each product
?	All products assigned to collections

Homepage and Technical

?	All 10 required sections added
?	No placeholder or Lorem ipsum content anywhere
?	Hero banner has compelling headline and CTA button
?	Trust badges are visible near the cart/buy button
?	Main menu and footer menu links all work correctly
?	Checkout tested successfully with test card
?	Mobile view tested on phone
?	Judge.me Reviews installed with at least 3 sample reviews
?	Product labels visible on product grids

Final Deliverables — Submission Package

Deliverable	How to Get It
Shopify Partner Collaborator Invite	Admin → Settings → Users → Add collaborator → Enter Digital Heroes partner email
Shopify Preview Link	Your store URL: your-store.myshopify.com — include password (Test@123)
Product CSV File	Admin → Products → Export → Export all products as CSV → Save the file
Original Image Folder	All product images in original form (no edits)
Background-Removed Images	Same images with backgrounds removed using remove.bg or Canva
Brand Assets	Logo PNG + color palette (HEX codes) + font names

Store Quality Standards

6 Pillars, Design Rules, Evaluation Criteria

Store Quality.

Before submission, ask yourself: Does my store look like a real brand that is ready to sell? If yes — great. If not — keep refining.

The 6 Pillars of a Great Shopify Store

1. Clean Layout

- Sections are evenly spaced — not too tight or too far apart
- Content is centered and aligned — nothing looks crooked or off
- Consistent margins and padding throughout the entire store
- White space used effectively — the store does not feel cluttered

2. Strong Branding

- Logo is visible in the header on every page
- Brand colors used consistently — same shades everywhere
- Font pairing consistent — same heading and body font on all pages
- Brand voice consistent — tone of all text matches the brand personality

3. Professional Design

- Images are high quality — no blurry, pixelated, or stretched images
- All product images are uniform in style (same background, same angle)
- Buttons are the same style throughout — same color, same shape
- Icons and graphics match the brand color scheme

4. Good Visual Hierarchy

- Most important content (headlines, CTAs) is largest and most visible
- Supporting content (descriptions, details) is smaller
- The eye naturally moves from top to bottom in a logical flow
- Color contrast is strong — text is readable against backgrounds

5. Realistic eCommerce Experience

- The store has real-looking products with proper descriptions
- Reviews are visible on product pages
- Trust badges are present near the add-to-cart button
- Pricing looks realistic — not Rs.1 or Rs.99,999

6. Market-Ready Appearance

- No placeholder text, test images, or Lorem ipsum anywhere
- All links work — no broken pages or 404 errors
- The store could realistically be launched tomorrow and make sales
- A stranger would believe it is a real brand

Design Do's and Don'ts

DO	DON'T
Use 3 brand colors maximum	Use 6+ colors randomly throughout the store
Use 2 fonts — one heading, one body	Use 4+ different fonts on the same page
Use high-quality product images	Use blurry, watermarked, or stretched images
Write real, helpful product descriptions	Leave placeholder or auto-generated dummy text
Show trust badges near the cart/buy button	Hide trust signals deep in the footer only
Test your store on mobile before submitting	Submit without checking how it looks on phone
Keep navigation simple — 4 to 6 menu items	Add 10+ items to the main menu
Make all CTA buttons the same accent color	Use different button colors on different pages

Evaluation Criteria

Category	What is Evaluated	Weight
Brand Identity	Clear niche, professional logo, consistent colors and fonts	20%
Product Quality	3 to 10 well-described products with quality images and pricing	20%
Homepage Design	All required sections present and properly designed	20%
Store Completeness	All pages, navigation, apps, and footer properly set up	15%
User Experience	Easy to navigate, logical flow, mobile responsive	15%
Technical Quality	Checkout works, links work, no errors, proper SEO fields	10%

Shopify AI — Sidekick Deep Dive

Sidekick Features, Advanced Prompts, SEO, Limitations

Shopify AI.

Shopify Sidekick is an AI assistant built directly into Shopify Admin. It can generate content, suggest layouts, write product descriptions, optimize for SEO, and even generate custom Liquid section code.

How to Access → Click the sparkle icon (top right of Shopify admin dashboard)

What Sidekick Can Do

Task	What to Type in Sidekick
Generate Homepage Sections	"Add a benefits section highlighting free shipping, easy returns, and quality products"
Improve Product Descriptions	"Rewrite this product description to be more persuasive: [paste your description]"
SEO Optimization	"Suggest a meta title and description for a product called [product name]"
Layout Ideas	"What sections should I add to my homepage for a skincare brand?"
Generate Liquid Code	"Generate Liquid code for a before/after comparison slider for Dawn theme"
Discount Codes	"Create a 15% off discount code for all skincare products"
Collections Setup	"Set up an automated collection that includes all products tagged skincare"
Blog Content	"Write a 300-word blog post about the benefits of vitamin C for skin"

Advanced Prompting Patterns

Pattern 1 — Specifu brand context

"I am building a luxury skincare brand targeting women aged 25-40.
Brand colors: #F5F0E8 (cream) and #3F6B54 (moss green).
Write a homepage hero headline and subheading that communicates premium quality and natural ingredients."

Pattern 2 — Request structured output

"Generate a product description for a vitamin C serum.
Format:
- Opening hook (1 sentence, benefit-led)
- Key benefits (3 bullet points, max 15 words each)
- How to use (2 sentences)
- Whats included (1 sentence)
Total: under 200 words. Tone: premium but approachable."

Pattern 3 — Liquid code generation

```
"Generate a Shopify OS 2.0 custom section for the Dawn theme.  
The section should display a 3-column icon grid with:  
- Each column: icon (image upload), heading, and text block  
- Schema settings for all editable fields  
- Responsive on mobile (stack to 1 column)  
Output only the .liquid file content."
```

Sidekick for SEO

SEO Task	Prompt to Use
Meta Titles	"Write SEO-optimized meta title for [product]. Target keyword: [keyword]. Max 60 chars."
Meta Descriptions	"Write compelling meta description for [product]. Include keyword [keyword]. Max 160 chars."
Image Alt Text	"Write alt text for product image of vitamin C serum in glass bottle on white background."
Collection Descriptions	"Write 100-word SEO description for Brightening Skincare. Target keyword: vitamin C India."
Blog for SEO	"Write 500-word blog targeting: best face serum for dark spots in India. Include 4-5 times."

Sidekick Limitations

Sidekick is powerful but not perfect. Know its limits:

- Sidekick cannot directly edit theme files (.liquid) — it generates code you paste manually
- Generated Liquid code may need minor fixes for OS 2.0 compliance — always test in the theme editor
- Sidekick does not access competitors' stores or external product research data
- Brand voice must be reinforced every time — Sidekick does not remember previous conversations
- For complex custom sections, combine Sidekick output with manual Liquid coding

Liquid Coding in Shopify

OS 2.0, Schema, Variables, Loops, Blocks, DH Standards

Liquid Coding.

Liquid is the templating language that powers all Shopify themes. When you build an OS 2.0 section file, you are writing Liquid. It looks like a mix of HTML, CSS, and special Liquid tags.

What is Liquid?

Liquid is an open-source templating language created by Shopify. It has three types of tags:

Tag Type	Syntax	Purpose
Output tag	<code>{{ variable }}</code>	Renders a value — product title, image URL, price
Logic tag	<code>{% if / for / assign %}</code>	Controls flow — loops, conditions, variable assignment
Comment tag	<code>{% comment %}...{% endcomment %}</code>	Adds notes not rendered to the browser

OS 2.0 Section File Structure

Every custom section is a single .liquid file with three main parts: HTML/Liquid markup, a style block, and a schema block:

```
{{ 'section-name.css' | asset_url | stylesheet_tag }}

<div id="shopify-section-{{ section.id }}">
  <div class="page-width">
    <h2>{{ section.settings.heading }}</h2>
    <p>{{ section.settings.subheading }}</p>
  </div>
</div>

{% style %}
#shopify-section-{{ section.id }} {
  background: {{ section.settings.bg_color }};
  padding: {{ section.settings.pad_top }}px 0;
}
{% endstyle %}

{% schema %}
{
  "name": "Section Name",
  "settings": [
    { "type": "text", "id": "heading", "default": "Your Heading" },
    { "type": "color", "id": "bg_color", "default": "#FFFFFF" },
    { "type": "range", "id": "pad_top",
      "min": 0, "max": 100, "step": 4, "default": 40 }
  ],
  "presets": [{ "name": "Section Name" }]
}
{% endschema %}
```

Core Liquid Syntax

Variables and Output

```
{{ product.title }}           <!-- Product title -->
{{ product.price | money }}    <!-- Price formatted -->
{{ product.featured_image | img_url: '800x' }} <!-- Image URL -->
{{ section.settings.heading }} <!-- Schema setting -->
{{ shop.name }}               <!-- Store name -->
{{ cart.item_count }}         <!-- Items in cart -->
```

Loops — Displaying Collections

```
{% for product in collection.products %}
  <div class="product-card">
    
    <h3>{{ product.title }}</h3>
    <p>{{ product.price | money }}</p>
  </div>
{% endfor %}
```

Conditionals

```
{% if product.available %}
  <button>Add to Cart</button>
{% else %}
  <p>Sold Out</p>
{% endif %}

{% if product.compare_at_price > product.price %}
  <span class="badge--sale">Sale</span>
{% endif %}
```

Schema Settings Reference

Setting Type	Use Case	Example
"text"	Short single-line text input	"id": "heading", "default": "Our Story"
"textarea"	Multi-line text block	"id": "description"
"richtext"	HTML-formatted text	"id": "content"
"image_picker"	Upload an image	"id": "background_image"
"color"	Color swatch picker	"id": "text_color", "default": "#000000"
"range"	Numeric slider	min: 0, max: 100, step: 4, default: 40
"select"	Dropdown options	"options": [{"value": "left", "label": "Left"}]
"checkbox"	Toggle on/off	"id": "show_divider", "default": true
"collection"	Collection picker	"id": "featured_collection"

Digital Heroes Liquid Coding Standards

Rule	Detail
CSS Scoping	Always scope CSS to #shopify-section-{{ section.id }} to prevent style bleed
Style Block	Use {% style %} inside the section file — NOT {% stylesheet %}
Fonts	Use font_face filter inside {% style %} blocks only
ASCII Only	Section file content must be ASCII only — no Unicode, smart quotes, em-dashes in code
Range Defaults	Defaults must satisfy (default - min) % step === 0 or Shopify throws a FileSaveError
Theme Fonts	Access via settings.type_header_font and settings.type_body_font
Presets	Every section must include a presets array so it appears in Add section

Common Patterns

Responsive Image with Lazy Load

```
{%- if section.settings.image != blank -%}

{%- else -%}
  {{ 'hero-apparel-1' | placeholder_svg_tag: 'placeholder-svg' }}
{%- endif -%}
```

Font Face in Style Block

```
{% style %}
{% assign hf = settings.type_header_font %}
{% assign bf = settings.type_body_font %}
{{ hf | font_face }}
{{ bf | font_face }}
#shopify-section-{{ section.id }} h2 {
  font-family: {{ hf.family }}, {{ hf.fallback_families }};
  font-weight: {{ hf.weight }};
}
{% endstyle %}
```

NOTE Scope all JavaScript selectors to #shopify-section-{{ section.id }} so they work when multiple instances exist on one page.
